

Audi original starter batteries

Cold - start

Audi original starter batteries are designed to always provide enough power for cold start in winter. Starting is guaranteed in temperatures as low as -25 degrees c. Reliability is also assured in summer through reduced use of water, which keeps the battery 'cold'. This reduction in water also results in lower maintenance.

Best in test

When tested in 'Auto Strassenverkehr' magazine Audi original starter batteries emerged as the test winner. Similarly when DEKRA tested Audi/Volkswagen original starter batteries they came to the following conclusion: "This was a test under extreme conditions. Audi/Volkswagen battery showed the best performance".

Long life for all

State-of-the-art long life technology is built into every Audi original starter battery. The introduction of an adapter strip extends the benefits of long life technology to older models.

Ready to go

Audi original starter batteries are already filled and charged on delivery, so they are ready for immediate use.

Purchase your Audi original battery through our Parts department today. All batteries carry a 5 year, pro rated monthly warranty.

You never have to question ORIGINAL EQUIPMENT REPLACEMENT PARTS.
